

Bancarotta

As long as the banker makes sure no more than 30% of the cash stored is taken out at once, he can keep giving out loans to consumers of wealth that was never there to begin with....Greece. The money supply does not match the capital earned in the economy. The issue is not that money is being printed (nothing wrong with that), but instead that the money does not match the amount of loans being given out. Too many loans have been given out, it's that simple. As proof, if everyone asked for their loans/ money in the bank in gold, it would not be there. Pay back all of your consumer debts and/ or do bank rushes.

The bank that hands out bad loans can get them using their paper currency because other people are accepting it. This means his clients can get the loans and he can pay using either gold (whatever is in the bank) or his paper notes. This inflates the value of assets because people will go to him for loans and they want his currency. He put fraud money into circulation in order to expand, our dollars is a ponzi scheme. You cannot print money and loan it out in interest. You can only charge interest on money that is earned. You also cannot make a loan and print money to pay for it.

America borrows money from private banks and from the Federal Reserve making us pay interest on these loans.

Whatever a good interest rate is set (6%) at is the value of the asset (home).

When total debts exceed the money supply, someone has to come up short. The money supply will not match the interest on the loan.

The "broken stand (banca)" gave rise to the term "bankruptcy". Banca in Italian = stand or bench. Rotta means broken. Hence, bancarotta = Bank Broken: Bankrupt (Bank Ruptured) or "broke".

Higher production means lower prices which raises our standard of living

"Unless we have a Central Bank with control of credit resources, this country is going to undergo the most severe and far reaching money panic in its history." - Jacob Schiff pg.41

Income tax and Federal Reserve came in 1913. Booms and busts are not natural. The asset is not worth the value it is charged because you paid in a loan, not just because of the interest paid on it.

Everything will shut down if the dollar collapses. Every transaction that is on a loan or requires money to run will be shut down because the goods can't be purchased/ produced. It cannot be further funded until the problem is resolved.

Goldstein's generous financial contributions to the "left wing" Parliamentarians who always advocate for grand welfare-for-vote schemes; and the "right wing" Parliamentarians who always advocate for war, will create a massive welfare-warfare state that must perpetually borrow money to cover its spending. "Right wing" also advocates for free trade which favors multinational corporations while "left wing" favors tariffs on countries who take our exported goods.

When Goldstein wants to withdraw money from the economy (bust), his Central Bank can sell off bonds to the investors. This removes money from the system as it returns to Goldstein's vault

The "challenge" for the Jewish "geniuses" at the Federal Reserve is to keep enough water in the bucket to prevent it from emptying out (Great Depression, Asset Crashes) -- while not pouring so much in that the bucket overflows (high inflation, hyperinflation, asset bubbles, "overheating" economy etc.).

Buying low-----selling high creates fake wealth and is corrupt practice. You are dumping an asset onto someone else who might not be able to afford it and are inflating the value of the asset (house). The people who buy the home expect it to go up. You sold the home at a high because other sellers did the same. The value of the home is the same as before you helped boom it. A game in which the biggest winners are those who know in advance when the next "liquidity" cycle is going to be rigged. The insiders make money on both the "ups" and "downs".

All currency should be issued interest-free from the National Treasury or National Bank. Loans go out = monetary expansion (inflation / boom) --- Loans get repaid = monetary contraction (deflation / bust).

Only a tiny fraction of the loot which the Feds rake in is actually used to fund highway / road infrastructure and the courts. Police, firemen and schools are mostly funded on the local level.

Class warfare demagoguery for the envious and ignorant! In reality, the top 10% of U.S. earners pay about half of all income taxes. There is no shortage of money flowing into the coffers of the Internal Revenue service! The deficits (in America) are the result of excessive spending on the Department of Defense, welfare schemes, the Social Security and Medicaid Pyramid schemes, the useless Departments of Education, Energy, Homeland Security etc., as well as waste, fraud and abuse. pg. 78

The profit margin is actually one of the lowest components that factors into the price of a given product or service – generally averaging about 12%. There are entire industries that thrive on margins as low as 3% (health insurance and hospital care are among them!) The main overhead drivers of final retail prices are: commodity prices (affected by The Fed's inflation), business taxes, payroll taxes, cost of regulatory compliance, cost of protection against frivolous litigation (liability insurance), and labor costs (affected by The Fed's inflation).

The true rate of inflation does not count food, energy and rent prices.

The Chairman, Vice Chairman, and New York branch Chairman can actually outvote the 12 regional branches.

Currency Act of 1764- made it illegal for the American colonies to print their own money.

"There are two ways to conquer and enslave a nation. One is by the sword. The other is by debt." – John Adams

"By this means government may secretly and unobserved, confiscate the wealth of the people, and not one man in a million will detect the theft."
John Keynes

"Money is created when loans are issued and debts incurred, money is extinguished when loans are repaid". John B.

"The regional Federal Reserve banks are not government agencies. ...but are independent, privately owned and locally controlled corporations." - Lewis vs. United States, 9th Circuit 1982

"As soon as Mr. Roosevelt took office, the Federal Reserve began to buy government securities at the rate of ten million dollars a week for 10 weeks, and created one hundred million dollars in new [checkbook] currency, which alleviated the critical famine of money and credit, and the factories started hiring people again." -- Eustace Mullins, Author & Historian

^^^ U.S. Government bought bonds they sold out in 1913 from the Rothschild's in 1938. This was economic stimulus at its finest.

"Except for coins, which are issued by the government and make up only about one one-thousandth of the money supply, the entire U.S. money supply now consists of debt to private banks, for money they created with accounting entries on their books." - Professor Henry C.K. Liu, economist

"The Federal Reserve definitely caused the Great Depression by contracting the amount of currency in circulation by one-third from 1929 to 1933." - Milton Friedman
